Some More Features of Filters in Power BI

- The Filters pane displays all filters added by the designer to the report.

- You get an option of adding: Basic, Advance or TopN Filters to your Visual, Page and Report.

- The Filters pane is also where you can view information about the filters and interact with them.

- You can save the changes that you make or use Reset to default to revert to the original filter settings.

- Filters added at the Desktop is available for both Reader view& Edit View on the Power BI Services.
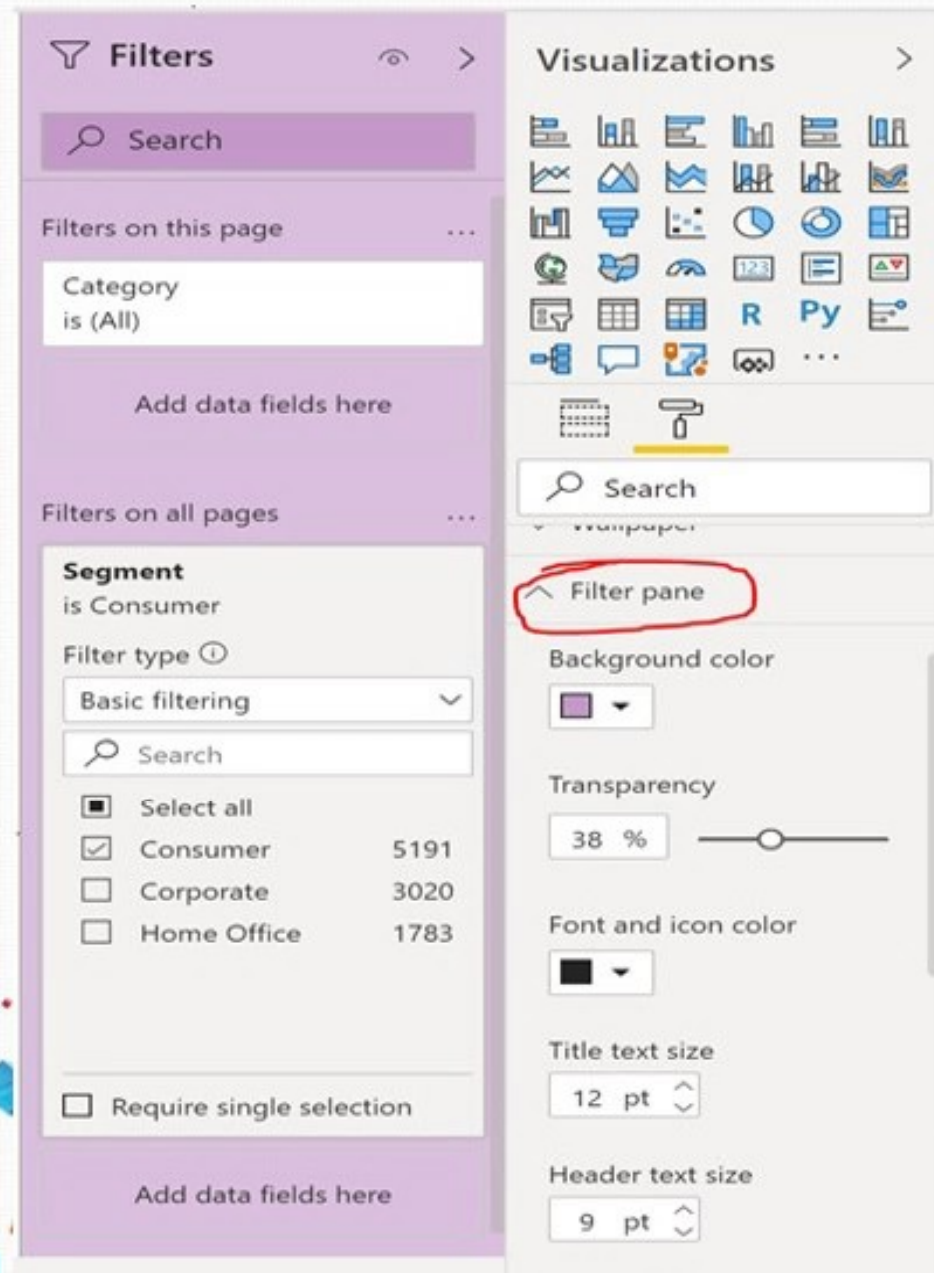

Format the Filter Pane

You can also format these elements for filter cards, depending on if they're applied (set to something) or available (cleared):

- Background colour and transperancy
- Border: on/ off and colour
- Border Font, colour, and text size
- Input box colour
- The field on the Filter pane can be renamed by click on it.
- All the fields in the Filter pane can be Sorted and rearranged. This plays an important role in the filtering of the visuals.

When you don't have anything selected on the sheet, you can Format the Filter Shelf
